Experience

Associate Software Developer – VakeelSaab

Mar 2026 – Present

Node.js, NestJS, TypeScript, Microservices, Sequelize, TypeORM, MySQL, Redis, Slack API, Exotel

New Delhi

- Designed a unified call-status resolution engine mapping 20+ Exotel telephony statuses across V1/V2/V3 webhook formats into a 10-value internal enum, with direction-, duration-, and database-aware resolution logic.
- Identified and fixed 13 production bugs via analysis of real call data (duplicate-webhook races, V2/V3 field mismatches, business logic overwriting telephony status), eliminating false “calls auto-disconnecting” reports that had blocked the operations team.
- Built a two-stage verification pipeline (synchronous webhook + async V3 API) with defense-in-depth (cleanup cron, delayed reconciliation) ensuring eventual status accuracy despite unreliable webhook delivery.
- Optimized a high-traffic SearchCalls API by parallelizing sequential database and enrichment calls, cutting latency by ~50%.
- Built a Call-Logs Statistics API using parallel aggregation queries, achieving a 4x performance gain over prior client-side aggregation of 1,000+ records.

Software Developer Intern – VakeelSaab

Dec 2025 – Feb 2026

Node.js, NestJS, Fastify, Python FastAPI, TypeORM, SQL, Google Gemini API

New Delhi

- Developed 20+ REST APIs across multiple microservices (user, lawyer-appointment, finance, doc-server) covering profile, scheduling, and earnings flows.
- Built a **GenAI audio-transcription service** integrating the Google Gemini 2.5 Flash API to convert call audio to text within the Node.js backend.
- Configured API Gateway routing in vs-gateway with JWT auth middleware and segregated microservice routes for cleaner service boundaries.
- Built an iCalendar (.ics) generation service in Python/FastAPI with S3 storage, integrated into the appointment-scheduling flow.

Projects

Chat with PDF – RAG Application

GitHub | Live

Next.js, TypeScript, Prisma, PostgreSQL (pgvector), Google Gemini

- Built a **RAG-based document QA system** enabling PDF uploads with AI-powered question answering and source citation.
- Implemented **semantic search** using pgvector, Gemini embeddings, 800-token chunking, and cosine similarity on PostgreSQL.
- Developed **token-streaming responses**, provider-agnostic AI integration, input validation, and rate limiting for reliable inference.

CampusMatch – Real-Time Social Networking Backend

GitHub | Live

Node.js, Express, MongoDB, Socket.IO

- Engineered **11 REST APIs + real-time chat** with JWT cookie authentication, bcrypt security, and middleware validation.
- Optimized MongoDB queries using **indexes, pagination (≤ 50), projections, and \$nin filtering**.
- Implemented **Socket.IO chat system** with persistent message storage and CI/CD deployment via GitHub Actions.

Prod-Alert-Sentry – Error Monitoring NPM Package

GitHub | Live

Node.js, TypeScript, Slack API

- Published monitoring package handling **500+ daily alerts** using event-driven architecture with retry logic.
- Reduced debugging time by **70%** using severity levels, context enrichment, and structured log rotation.

Education

Bharati Vidyapeeth’s Institute of Computer Applications and Management

Jul 2024 – Jun 2026

Master of Computer Application (MCA) – CGPA: 8.6/10

Delhi

IGNOU

Jul 2020 – Jun 2023

Bachelor of Computer Application (BCA)

Delhi

Technical Skills

Languages: C/C++, JavaScript (Node.js), TypeScript, Python, SQL

Backend: NestJS, Express.js, Fastify, FastAPI | REST APIs, Microservices, API Gateway, Authentication, Cron Jobs, Swagger/OpenAPI

AI / GenAI: LLM API Integration (Gemini, Groq), RAG, pgvector, Prompt Engineering, AI-assisted development (GitHub Copilot, Claude)

Databases & ORM: MySQL, PostgreSQL, MongoDB, Redis, TypeORM, Sequelize, Prisma

Tools: Git, Bitbucket, Jira, Postman, Docker, Kubernetes, AWS S3, GitHub Actions

Achievements

Solved **450+ problems on LeetCode** with max rating **1592**; **136+ problems** on GeeksforGeeks.
